Available as a Third-Party PBC:
# Algolia Search Engine

On the Spryker App Composition Platform, Algolia is now just One Click Away

Spryker

What is Algolia?

Powerful Search API delivers content to users in milliseconds! With Algolia Search, developers can rely on a simple and robust API to build the experiences at the core of their companies' applications. Algolia Search democratizes the power of API building blocks with management UIs necessary to optimize user experiences and drive business results. From digital storefronts to virtual reality productivity tools, Algolia Search powers search and discovery experiences anywhere.

"We are truly excited about adding **world-class search engine Algolia** to Spryker App Composition Platform. Our customers now have excellent search engines to choose from, based on the exact needs of their business."

Boris Lokschin,
CEO at Spryker

The Spryker Algolia integration:

- updates automatically when the customer's database changes, allowing for more accurate results without any additional maintenance
- indexes the product data in a way to support different searchability and sortability strategies
- enables your Spryker shop or marketplace to properly and seamlessly display the different elements of the search experience (such as search box or search results).

Why use Algolia as a Spryker PBC?

As with any app on Spryker App Composition Platform, no coding is required to add the Algolia app. The only remaining work is connecting and configuring the app, which can be done by a business user, with no developer resources needed.

In line with Spryker's commitment to composable commerce, the Algolia integration is immediately and seamlessly available to all of Spryker's Platform-as-a-Service (PaaS+) customers around the world, who seek to have fast and easy access to a growing number of 3rd-party services in a best-of-breed digital commerce environment.
